

Celery

Description

Celery stalks, also known as ribbed celery, were first renowned for their medicinal benefits, and have since found their way onto our plates.

This leafy vegetable is enjoyed all year round. It can be eaten both raw and cooked, and its unmistakable flavor makes it a must-have!

Watering

Water regularly to keep the soil moist.

Sowing

1 Sow in rows: dig furrows 2 to 3 cm deep, 25 cm apart. Place seeds and cover with soil. Water in fine rain.

2 As soon as 3-4 leaves appear, keep only the most vigorous plants.

Maintenance

Weeding and hoe regularly.

Mulching will reduce the frequency of watering.

Harvest

Harvesting takes place around 5 to 6 months after sowing.

Celery should be ripe when harvested, when the leaves are green and the heart white.

Tips

A number of plants can be combined with celeries to protect them from pests and ensure their growth: aromatics such as chives and coriander, as well as tomatoes, lettuce, cauliflower and flowers such as marigolds and nasturtium.
