

Turnip

Description

The turnip, a root vegetable, is not only rich in water, but also a source of minerals, vitamins and fiber. Somewhat forgotten at the expense of the potato, the turnip has its place at the heart of the vegetable garden!

With its characteristic mild, sweet flavour, the turnip is sure to delight our taste buds in a wide range of recipes.

Watering

Water regularly to keep the soil moist.

Sowing

1

Sow in rows: dig furrows 1 cm deep, 30 cm apart. Place seeds and cover with soil. Water in fine rain.

2

As soon as 3-4 leaves appear, keep only the most vigorous plants.

Maintenance

Weeding and hoe regularly to limit weeds.

Mulching will reduce the frequency of watering.

Harvest

Harvesting takes place around 5 to 6 months after sowing.

Turnips should be ripe before picking, firm and heavy.

Tips

A number of plants can be combined with turnips to protect them from pests and ensure their growth: aromatics with thyme and rosemary, but also lettuce, carrots, fennel and flowers, marigold and nasturtium.
